

FILENAME: zipcode.census.file.txt.gz

LRECL: 454 (94,537 records)

ABSTRACT: The Census Zip Code file was created using all the zip codes found in the Census 1990, Census 2000 and the American Community Survey (ACS) 2008-2012. The ACS is a nationwide survey that produces characteristics of the population and housing, similar to the long-form questionnaire used in Census 2000. The ACS was used in place of the 2010 Census files because detailed demographic, social, economic, and housing data are no longer collected as part of the decennial census. The data that were collected from the long form sample are now produced from the American Community Survey.

Note: The ZIP Code Tabulation Areas (ZCTA) have been used to extract zip code level Census data from the 2000 Census and the ACS 2008-2012 files. The ZCTAs are a statistical geographic entity produced by the U.S. Census Bureau for tabulating summary statistics, and was first developed for the 2000 Census. For more information on the ZCTA, refer to the Census Website at <http://www.census.gov>.
